BUSINESS OBJECTIVES

- Manage the implementation of Health Information System (HIS) for SMRC; a world-class patient care and a center of medical education and biomedical research.
- Procure and implement different HIS for SMRC to achieve its vision, mission, and objectives
- Integrate different health and administrative systems.
- Develop different processes for different health departments.
- Manage vendor to implement the HIS.

malomatia's ROLE

- Structure clinical informatics specialists and administrative informatics specialists workforce for SMRC.
- Procure and implement HIS.
- Manage implementing state-of-the-art Health Information System such as (CIS, ERP, LMS, System Integration, Business Intelligence, Content Management System, and RIS/PACS).
- Clinical and administrative process structure and review of the greenfield site for HIS implementation.
- Manage designing and testing implemented HIS.

RESULTS ACHIEVED

- Makes it easier for clinicians to access the patient's medical record, by uniting the information held on a number of systems within the hospital setting.
- There is a clinical advantage in being able to access test results instantly, without having 'to chase them up', or having to re-order duplicate tests.
- Currently, it can take weeks for patient medical records to be transferred from one GP to another. The process involves printing records and sending them to the next practice, where they have to be re-keyed. The electronic transfer of records will make the process significantly easier and quicker.
